1 Monthly Progress

Month 1: 23/02/2026 - 20/03/2026

Month 1: 23/03/2026 - 24/04/2026

Overview

Completed dynamic aperture and momentum acceptance studies for different configurations. Experimented with slicing, integrators, and fringe fields. Now introducing misalignments and corrections.

Work completed

- Plotted DA/MA for 7 different sextupole configurations
- Optimised configurations to increase DA/MA
- Changed number of slices in integrators to increase quality of plots
- Introduced fringe fields for every magnet type and compared with "perfect" results
- Performed frequency map analysis
- Introduced misalignments, inserted BPMs and correctors, and performed orbit correction
